RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . that of the first series, hence this remainder will also approach zero as a limit, and therefore either series will be convergent. 199. As explained in 120, when x is real, the symbol x denotes the numerical or absolute value of x ; thus, -21^2 and 121^2 . 200. We shall now consider the convergence of the geometric series $1 + x + x^2 + \dots$. By division, or by the theory of the sum of a geometric series, $1 - x^n = (1 - x)(1 + x + x^2 + \dots + x^{n-1})$. There are three cases to consider according as $a < l$, $a = l$, or $a > l$. First, when $a < l$. In this case $x^n \rightarrow 0$ as n becomes indefinitely great. The denominator, $1 - x$, is constant. Therefore $x^n \rightarrow 0$. Hence the limit of the sum of n terms as $n \rightarrow \infty$ becomes indefinitely great is $\frac{1}{1-x}$, which is a finite and determinate limit. Therefore by the definition of a convergent series, 195, the series is convergent. Second, when $a = l$. In this case x^n becomes infinite as n becomes indefinitely great; and therefore the sum of n terms does not approach a finite limit, and therefore the series is divergent, by 195. Third, when $a > l$. In this case each term is unity and the sum of n terms becomes infinite as n becomes infinite, and the series is therefore divergent. When $x = -1$ the sum of n terms is alternately 1 and 0, and therefore the sum of n terms does not approach a determinate...
