

A Textbook of Botany for Colleges Volume 1-2 (Paperback)

By William Francis Ganong

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .or prothallus stage, close to the ground. On the left, a section of the prothallus in which the egg cell is buried and covered by the tubular archegonium. On the right, the free-swimming sperm cells escaping from the antheridium. When the sex cells are ripe, the access of water causes both structures to open; the archegonium releases into the water a substance (malic acid) very attractive to the sperm cells, which swim towards it, and enter the tube, when the first to reach the egg cell fuses therewith and effects fertilization. (After L. Kny.) itself develops in a special structure (Fig. 218); and then the developing embryo is supplied with food by the parent plant. Here is evidently represented still another stage in the evolution of sex, in which have been developed, above the earlier differences, special and different structures, which protect the sex cells in...
